Attempt : 1
Total Mark : 20
Marks Obtained : 20

Section 1 : MCQ

1. A user performs the following operations on stack of size 5 then which of the following is correct statement for Stack?

```
push(1);
pop();
push(2);
push(3);
pop();
push(2);
pop();
pop();
push(4);
pop();
pop();
push(5);
```

Answer

Underflow Occurs

Status : Correct ***Marks : 1/1***

2. In an array-based stack, which of the following operations can result in a Stack underflow?

Answer

Popping an element from an empty stack

Status : Correct ***Marks : 1/1***

3. The user performs the following operations on the stack of size 5 then at the end of the last operation, the total number of elements present in the stack is

```
push(1);
pop();
push(2);
push(3);
pop();
push(4);
pop();
pop();
push(5);
```

Answer

1

Status : Correct ***Marks : 1/1***

4. When you push an element onto a linked list-based stack, where does the new element get added?

Answer

At the beginning of the list

Status : Correct ***Marks : 1/1***

5. Which of the following operations allows you to examine the top element of a stack without removing it?

Answer

Peek

Status : Correct ***Marks : 1/1***

6. Consider a linked list implementation of stack data structure with three operations:

push(value): Pushes an element value onto the stack.pop(): Pops the top element from the stack.top(): Returns the item stored at the top of the stack.

Given the following sequence of operations:

push(10);pop();push(5);top();

What will be the result of the stack after performing these operations?

Answer

The top element in the stack is 5

Status : Correct ***Marks : 1/1***

7. The result after evaluating the postfix expression 10 5 + 60 6 / * 8 - is

Answer

142

Status : Correct ***Marks : 1/1***

8. What is the advantage of using a linked list over an array for implementing a stack?

Answer

Linked lists can dynamically resize

Status : Correct **Marks : 1/1**

9. What will be the output of the following code?

```
#include <stdio.h>
#define MAX_SIZE 5
void push(int* stack, int* top, int item) {
    if (*top == MAX_SIZE - 1) {
        printf("Stack Overflow\n");
        return;
    }
    stack[++(*top)] = item;
}
int pop(int* stack, int* top) {
    if (*top == -1) {
        printf("Stack Underflow\n");
        return -1;
    }
    return stack[(*top)--];
}

int main() {
    int stack[MAX_SIZE];
    int top = -1;
    push(stack, &top, 10);
    push(stack, &top, 20);
    push(stack, &top, 30);
    printf("%d\n", pop(stack, &top));
    printf("%d\n", pop(stack, &top));
    printf("%d\n", pop(stack, &top));
    printf("%d\n", pop(stack, &top));
    return 0;
}
```

Answer

302010Stack Underflow-1

Status : Correct **Marks : 1/1**

10. In the linked list implementation of the stack, which of the following operations removes an element from the top?

Answer

Pop

Status : Correct ***Marks : 1/1***

11. Here is an Infix Expression: 4+3*(6*3-12). Convert the expression from Infix to Postfix notation. The maximum number of symbols that will appear on the stack AT ONE TIME during the conversion of this expression?

Answer

4

Status : Correct ***Marks : 1/1***

12. What will be the output of the following code?

```
#include <stdio.h>
#define MAX_SIZE 5
int stack[MAX_SIZE];
int top = -1;
int isEmpty() {
   return (top == -1);
}
int isFull() {
   return (top == MAX_SIZE - 1);
}
void push(int item) {
   if (isFull())
      printf("Stack Overflow\n");
   else
      stack[++top] = item;
}
int main() {
   printf("%d\n", isEmpty());
   push(10);
```

```
    push(20);
    push(30);
    printf("%d\n", isFull());
    return 0;
}
```

Answer

10

Status : Correct ***Marks : 1/1***

13. Which of the following Applications may use a Stack?

Answer

All of the mentioned options

Status : Correct ***Marks : 1/1***

14. In a stack data structure, what is the fundamental rule that is followed for performing operations?

Answer

Last In First Out

Status : Correct ***Marks : 1/1***

15. Consider the linked list implementation of a stack.

Which of the following nodes is considered as Top of the stack?

Answer

First node

Status : Correct ***Marks : 1/1***

16. Elements are Added on _____ of the Stack.

Answer

Top

Status : Correct **Marks : 1/1**

17. What is the value of the postfix expression 6 3 2 4 + - *?

Answer

-18

Status : Correct **Marks : 1/1**

18. What will be the output of the following code?

```
#include <stdio.h>
#define MAX_SIZE 5
int stack[MAX_SIZE];
int top = -1;
void display() {
    if (top == -1) {
        printf("Stack is empty\n");
    } else {
        printf("Stack elements: ");
        for (int i = top; i >= 0; i--) {
            printf("%d ", stack[i]);
        }
        printf("\n");
    }
}
void push(int value) {
    if (top == MAX_SIZE - 1) {
        printf("Stack Overflow\n");
    } else {
        stack[++top] = value;
    }
}
int main() {
    display();
    push(10);
```

```
    push(20);
    push(30);
    display();
    push(40);
    push(50);
    push(60);
    display();
    return 0;
}
```

Answer

Stack is emptyStack elements: 30 20 10Stack OverflowStack elements: 50 40 30 20 10

Status : Correct ***Marks : 1/1***

19. Pushing an element into the stack already has five elements. The stack size is 5, then the stack becomes

Answer

Overflow

Status : Correct ***Marks : 1/1***

20. What is the primary advantage of using an array-based stack with a fixed size?

Answer

Efficient memory usage

Status : Correct ***Marks : 1/1***

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

In a coding competition, you are assigned a task to create a program that simulates a stack using a linked list.

The program should feature a menu-driven interface for pushing an integer to stack, popping, and displaying stack elements, with robust error handling for stack underflow situations. This challenge tests your data structure skills.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the integer value onto the stack. If the choice is 1, the following input is a space-separated integer, representing the element to be pushed onto

the stack.

Choice 2: Pop the integer from the stack.

Choice 3: Display the elements in the stack.

Choice 4: Exit the program.

Output Format

The output displays messages according to the choice and the status of the stack:

If the choice is 1, push the given integer to the stack and display the following: "Pushed element: " followed by the value pushed.

If the choice is 2, pop the integer from the stack and display the following: "Popped element: " followed by the value popped.

If the choice is 2, and if the stack is empty without any elements, print "Stack is empty. Cannot pop."

If the choice is 3, print the elements in the stack: "Stack elements (top to bottom): " followed by the space-separated values.

If the choice is 3, and there are no elements in the stack, print "Stack is empty".

If the choice is 4, exit the program and display the following: "Exiting program".

If any other choice is entered, print "Invalid choice".

Refer to the sample input and output for the exact format.

Sample Test Case

Input: 1 3
1 4
3
2
3
4
Output: Pushed element: 3
Pushed element: 4
Stack elements (top to bottom): 4 3
Popped element: 4
Stack elements (top to bottom): 3
Exiting program

Answer

```
#include <stdio.h>
#include <stdlib.h>

struct Node {
    int data;
    struct Node* next;
};

struct Node* top = NULL;

// You are using GCC
void push(int value) {
    //Type your code here
    struct Node*newNode=(struct Node*)malloc(sizeof(struct Node*));
    newNode->data=value;
    newNode->next=top;
    top=newNode;
    printf("Pushed element: %d\n",value);
}
```

```
void pop() {
    //Type your code here
    if(top==NULL){
        printf("Stack is empty.Cannot pop.\n");
    }
    else{
        struct Node*temp=top;
        printf("Popped element:%d\n",temp->data);
        top=top->next;
        free(temp);
    }
}

void displayStack() {
    //Type your code here
    if(top==NULL){
        printf("Stack is empty\n");
    }
    else{
        printf("Stack elements (top to bottom): ");
        struct Node* temp=top;
        while(temp!=NULL){
            printf("%d",temp->data);

            temp=temp->next;
        }
        printf("\n");
    }
}

int main() {
    int choice, value;
    do {
        scanf("%d", &choice);
        switch (choice) {
            case 1:
                scanf("%d", &value);
                push(value);
                break;
            case 2:
                pop();
                break;
```

```
            case 3:
                displayStack();
                break;
            case 4:
                printf("Exiting program\n");
                return 0;
            default:
                printf("Invalid choice\n");
        }
    } while (choice != 4);

    return 0;
}
```

Section 1 : Coding

1. Problem Statement

Sanjeev is in charge of managing a library's book storage, and he wants to create a program that simplifies this task. His goal is to implement a program that simulates a stack using an array.

Help him in writing a program that provides the following functionality:

Add Book ID to the Stack (Push): You can add a book ID to the top of the book stack. Remove Book ID from the Stack (Pop): You can remove the top book ID from the stack and display its details. If the stack is empty, you cannot remove any more book IDs.Display Books ID in the Stack (Display): You can view the books ID currently on the stack.Exit the Library: You can choose to exit the program.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the book onto the stack. If the choice is 1, the following input is a space-separated integer, representing the ID of the book to be pushed onto the stack.

Choice 2: Pop the book ID from the stack.

Choice 3: Display the book ID in the stack.

Choice 4: Exit the program.

Output Format

The output displays messages according to the choice and the status of the stack:

1. If the choice is 1, push the given book ID to the stack and display the corresponding message.
2. If the choice is 2, pop the book ID from the stack and display the corresponding message.
3. If the choice is 2, and if the stack is empty without any book ID, print "Stack Underflow"
4. If the choice is 3, print the book IDs in the stack.
5. If the choice is 3, and there are book IDs in the stack, print "Stack is empty"
6. If the choice is 4, exit the program and display the corresponding message.
7. If any other choice is entered, print "Invalid choice"

Refer to the sample output for the exact text and format.

Sample Test Case

Input: 1 19
1 28
2
3
2
4
Output: Book ID 19 is pushed onto the stack
Book ID 28 is pushed onto the stack

Book ID 28 is popped from the stack
Book ID in the stack: 19
Book ID 19 is popped from the stack
Exiting the program

Answer

```
#include<stdio.h>
#define MAX 100
int stack[MAX],top=-1;
int main(){
   int ch,id;
   while(scanf("%d",&ch)){
      if(ch==1){
         scanf("%d",&id);
         if(top==MAX-1)
         printf("Stack Overflow\n");
         else
         printf("Book ID %d is pushed onto the stack\n",stack[++top]=id);
      }
      else if(ch==2){
         if(top==-1)
         printf("Stack Underflow\n");
         else
         printf("Book ID %d is popped from the stack\n",stack[top--]);
      }
      else if(ch==3){
         if(top==-1)
         printf("Stack is empty\n");
         else{
            printf("Book ID in the stack:");
            for(int i=0;i<=top;i++)
            printf("%d",stack[i]);
            printf("\n");
         }
      }
      else if(ch==4){
         printf("Exiting the program\n");
         break;
      }
      else{
         printf("Invalid choice\nExiting the program\n");
         break;
```

```
      }
    }
    return 0;
}
```

Section 1 : Coding

1. Problem Statement

Sharon is developing a programming challenge for a coding competition. The challenge revolves around implementing a character-based stack data structure using an array.

Sharon's project involves a stack that can perform the following operations:

Push a Character: Users can push a character onto the stack.Pop a Character: Users can pop a character from the stack, removing and displaying the top character.Display Stack: Users can view the current elements in the stack.Exit: Users can exit the stack operations application.

Write a program to help Sharon to implement a program that performs the given operations.

Input Format

The input consists of integers corresponding to the operation that needs to be performed:

Choice 1: Push the character onto the stack. If the choice is 1, the following input is a space-separated character, representing the character to be pushed onto the stack.

Choice 2: Pop the character from the stack.

Choice 3: Display the characters in the stack.

Choice 4: Exit the program.

Output Format

The output displays messages according to the choice and the status of the stack:

1. If the choice is 1, push the given character to the stack and display the pushed character having the prefix "Pushed: ".
2. If the choice is 2, undo the character from the stack and display the character that is popped having the prefix "Popped: ".
3. If the choice is 2, and if the stack is empty without any characters, print "Stack is empty. Nothing to pop."
4. If the choice is 3, print the elements in the stack having the prefix "Stack elements: ".
5. If the choice is 3, and there are no characters in the stack, print "Stack is empty."
6. If the choice is 4, exit the program.
7. If any other choice is entered, print "Invalid choice"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 2
4

Output: Stack is empty. Nothing to pop.

Answer

```
#include <stdio.h>
```

```
#include <stdbool.h>

#define MAX_SIZE 100

char items[MAX_SIZE];
int top = -1;

void initialize() {
    top = -1;
}
bool isFull() {
    return top == MAX_SIZE - 1;
}

bool isEmpty() {
    return top == -1;
}

// You are using GCC
void push(char value) {
   if(top>=MAX_SIZE-1){
       printf("Stack Overflow");

   }
   items[++top]=value;
   printf("Pushed: %c\n",value);
}
char pop() {
    //Type your code here
    if(top==-1){
        printf("Stack is empty.Nothing to pop.\n");
        return '\0';
    }
    printf("Popped: %c\n",items[top]);
    return items[top--];
}
void display() {
    //Type your code here
    if(top==-1){
        printf("Stack is empty.\n");
        return;
    }
    printf("Stack elements: ");
```

```
    for(int i=top;i>=0;i--){
        printf("%c",items[i]);
    }
    printf("\n");
}

int main() {
    initialize();
    int choice;
    char value;

    while (true) {
        scanf("%d", &choice);
        switch (choice) {
            case 1:
                scanf(" %c", &value);
                push(value);
                break;
            case 2:
                pop();
                break;
            case 3:
                display();
                break;
            case 4:
                return 0;
            default:
                printf("Invalid choice\n");
        }
    }
    return 0;
}
```

Attempt : 1
Total Mark : 30
Marks Obtained : 30

Section 1 : Coding

1. Problem Statement

In an educational setting, Professor Smith tasks Computer Science students with designing an algorithm to evaluate postfix expressions efficiently, fostering problem-solving skills and understanding of stack-based computations.

The program prompts users to input a postfix expression, evaluates it, and displays the result, aiding students in honing their coding abilities.

Input Format

The input consists of the postfix mathematical expression.

The expression will contain real numbers and mathematical operators (+, -, *, /), without any space.

Output Format

The output prints the result of evaluating the given postfix expression.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 82/

Output: 4

Answer

```
#include <stdio.h>
#include <ctype.h>

#define MAX 100

int stack[MAX];
int top = -1;

void push(int val) {
   stack[++top] = val;
}
int pop() {
   return stack[top--];
}
int evaluatePostfix(char* expr) {
   for (int i = 0; expr[i] != '\0'; i++) {
      char ch = expr[i];

      if (isdigit(ch)) {
         push(ch - '0');
      } else {
         int val2 = pop();
         int val1 = pop();
         switch (ch) {
            case '+': push(val1 + val2); break;
            case '-': push(val1 - val2); break;
            case '*': push(val1 * val2); break;
            case '/': push(val1 / val2); break;
```

```
        }
    }
  }
  return pop();
}

int main() {
  char expr[100];
  scanf("%s", expr);
  int result = evaluatePostfix(expr);
  printf("%d", result);
  return 0;
}
```

Status : Correct ***Marks : 10/10***

2. Problem Statement

You are required to implement a stack data structure using a singly linked list that follows the Last In, First Out (LIFO) principle.

The stack should support the following operations: push, pop, display, and peek.

Input Format

The input consists of four space-separated integers N, representing the elements to be pushed onto the stack.

Output Format

The first line of output displays all four elements in a single line separated by a space.

The second line of output is left blank to indicate the pop operation without displaying anything.

The third line of output displays the space separated stack elements in the same line after the pop operation.

The fourth line of output displays the top element of the stack using the peek operation.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 11 22 33 44
Output: 44 33 22 11

33 22 11
33

Answer

```
#include <stdio.h>
#include <stdlib.h>
struct Node {
    int data;
    struct Node* next;
};
struct Node* top = NULL;
void push(int value) {
    struct Node* newNode = (struct Node*)malloc(sizeof(struct Node));
    if (!newNode) {
        printf("Memory allocation failed\n");
        exit(1);
    }
    newNode->data = value;
    newNode->next = top;
    top = newNode;
}
void pop() {
    if (top == NULL) {
        return;
    }
    struct Node* temp = top;
    top = top->next;
    free(temp);
}
void display() {
    struct Node* current = top;
    while (current != NULL) {
```

```
        printf("%d ", current->data);
        current = current->next;
    }
    printf("\n");
}
void peek() {
    if (top != NULL) {
        printf("%d\n", top->data);
    }
}

int main() {
    int a, b, c, d;
    scanf("%d %d %d %d", &a, &b, &c, &d);
    push(a);
    push(b);
    push(c);
    push(d);
    display();
    pop();
    display();
    peek();

    return 0;
}
```

Status : Correct **Marks : 10/10**

3. Problem Statement

Suppose you are building a calculator application that allows users to enter mathematical expressions in infix notation. One of the key features of your calculator is the ability to convert the entered expression to postfix notation using a Stack data structure.

Write a function to convert infix notation to postfix notation using a Stack.

Input Format

The input consists of a string, an infix expression that includes only digits(0-9), and operators(+, -, *, /).

Output Format

The output displays the equivalent postfix expression of the given infix expression.

Refer to the sample output for formatting specifications.

Sample Test Case

Input: 1+2*3/4-5

Output: 123*4/+5-

Answer

```
// You are using GCC
#include <stdio.h>
#include <stdlib.h>
#include <ctype.h>
#include <string.h>
#define MAX 100
typedef struct {
    char items[MAX];
    int top;
} Stack;
void initStack(Stack* s) {
    s->top = -1;
}
int isEmpty(Stack* s) {
    return s->top == -1;
}
void push(Stack* s, char c) {
    if (s->top >= MAX - 1) {
        return;
    }
    s->items[++(s->top)] = c;
}
char pop(Stack* s) {
    if (isEmpty(s)) {
        return '\0';
    }
    return s->items[(s->top)--];
```

```
}
char peek(Stack* s) {
    if (isEmpty(s)) {
        return '\0';
    }
    return s->items[s->top];
}
int precedence(char op) {
    switch (op) {
        case '*':
        case '/':
            return 2;
        case '+':
        case '-':
            return 1;
        default:
            return 0;
    }
}
void infixToPostfix(const char* infix, char* postfix) {
    Stack s;
    initStack(&s);
    int i = 0, k = 0;
    char c;

    while ((c = infix[i++]) != '\0') {
        if (isdigit(c)) {
            postfix[k++] = c;
        } else if (c == '(') {
            push(&s, c);
        } else if (c == ')') {
            while (!isEmpty(&s) && peek(&s) != '(') {
                postfix[k++] = pop(&s);
            }
            if (!isEmpty(&s) && peek(&s) == '(') {
                pop(&s); // Discard '('
            }
        } else if (c == '+' || c == '-' || c == '*' || c == '/') {
            while (!isEmpty(&s) && precedence(peek(&s)) >= precedence(c)) {
                postfix[k++] = pop(&s);
            }
            push(&s, c);
```

```
        }
    }

    while (!isEmpty(&s)) {
        postfix[k++] = pop(&s);
    }

    postfix[k] = '\0';
}

int main() {
    char infix[MAX];
    char postfix[MAX];
    scanf("%s", infix);
    infixToPostfix(infix, postfix);
    printf("%s\n", postfix);

    return 0;
}
```
